

System 1 - comes preconfigured and ready to go by Clarity AVL **\$3,868.60** (add \$234.01 for tax)

- **1 30X Optical Zoom camera** 
- **1 8-Port Gigabit Ethernet Switch** 
- **Generic System Wiring Bundle** – (all necessary interconnect cables for system: network cable for control and streaming; line cable for audio embedding)
- **Network System Programming** for Live Streaming
- **Shop Labor** – preparation of cables (cut, labeled and sanitized), tested and packaged
- **Shipment**

System 1 is for a single camera configured to live stream directly to YouTube. The camera is controlled from a user provided computer on which you can see what the camera sees. You start & stop your internet streaming broadcast from your computer. All you need is to plug the cables in, position your camera, and go to a browser page (like Google Chrome) on your computer for control. Your new camera comes with a bracket for simple wall mounting. Or, you can also put it onto a standard camera tripod or up on a shelf. Since it's powered over the cable you just plugged in, it's ready to go when you are!

System 2 – includes all of the above *and the Controller* **\$4569.16** (add \$285.99 for tax)

- **1 PTZ Camera Controller** 

System 2 includes everything in System 1 with a new physical controller for the camera. This has buttons for selecting presets and a joystick for controlling the pan/tilt/zoom function of the camera. You will continue to use your computer to see the camera image and start/stop the internet stream.

System 3 – includes all of the above *and a video presentation switcher* **\$7675.17** (add \$517.229 for tax)

- **1 Lumens CaptureVision Station** – processor for live streaming and recording video
- **1 Sceptre 24" screen, keyboard and mouse**

System 3 includes everything from System 2 and adds a video switcher so that you can elect to send out content from your presentation computer (like PowerPoint or Media Shout) as well as your camera. The switcher has a similar "browser" control to select what is being sent out over the internet stream. In addition, you can have "picture in picture" and other editing functions as well as control the various connected cameras. There is also a control option for just a keyboard and mouse. With this you can do what you need directly (including starting and stopping the internet stream) from the keyboard/mouse and front panel buttons without the computer. The switcher also allows you to directly record the live camera output as well as your network stream so you can archive all of the sources, and then later edit them together for a new presentation if you'd like.

Additional Options

Additional 30X Zoom Cameras – **\$2918.57** (add \$216.76 for tax)

HDMI Remote Output – **\$630.55** (add \$44.48 for tax)

- 1 HDMI Extender 
- 1 Sceptre 16" screen  

This option allows you to have a separate monitor for your camera so you can view it without connecting it to your computer. The cable for this option is already installed as part of your initial system.
